FAHIM YADGIR

Aspiring Data Analyst / Data Engineering Intern • BCA Third Year • SGPA 9.67
Pune, Maharashtra | +91 7385094941 | fahimyadgir07@gmail.com | github.com/fahim-yadgir

OBJECTIVE

Motivated BCA student (SGPA: 9.67) skilled in Python, SQL, C++, Pandas, and data tools like Power BI and Excel, with hands-on experience in database design and software development. Seeking a Data Analyst or Data Engineering internship to apply problem-solving skills and build real-world data solutions.

EDUCATION

Bachelor of Computer Applications (BCA) — Second Year SGPA: 9.67 / 10.00
School of Commerce, Management & Computer Studies, Azam Campus, Pune
Second Year completed — promoted to Third Year

TECHNICAL SKILLS

- **Programming Languages:** Python, C++, Java, PL/SQL
- **Data & Analytics:** Pandas, Power BI (Dashboard Design), Microsoft Excel (Pivot Tables, Lookups, Data Analysis)
- **Database Technologies:** MySQL, MySQL Workbench, Relational Schema Design, Query Optimization, Window Functions (ROW_NUMBER, RANK, DENSE_RANK, SUM/AVG OVER PARTITION BY), Joins & Subqueries
- **Developer Tools:** Git & GitHub (Version Control), VS Code, MySQL Workbench, Microsoft Excel, Power BI, Jupyter Notebook
- **Areas of Interest:** Data Analytics, Data Engineering, Database Management, Software Development

PROJECTS

Sales Data Analysis & Dashboard *Python | Pandas | SQL | Excel | Power BI | Report | GitHub*

- Cleaned and prepared a multi-region retail sales dataset using Excel and SQL (removed duplicates, handled missing values, standardized product and date fields) to build a reliable base for analysis
- Wrote SQL queries using JOINs, GROUP BY, HAVING, and aggregate functions (SUM, AVG, COUNT) to analyze sales performance by product category, region, and time period
- Applied window functions (RANK() OVER PARTITION BY region for top-selling products, SUM() OVER PARTITION BY for running monthly totals) and used Pandas to identify sales trends, seasonality, and top-performing products
- Built an interactive Power BI dashboard with slicers, bar/line charts, and KPI cards to visualize revenue growth, regional performance, and product-wise sales trends and maintained version-controlled updates on GitHub
- Compiled findings into a detailed analytical report summarizing key sales insights, trends, and recommendations for stakeholders

Finance Data Analysis & Dashboard *Excel | SQL | Power BI | Pandas | GitHub*

- Generated raw financial dataset with transaction records, categories, and date fields; cleaned and standardized data using Excel (removing duplicates, handling nulls, formatting columns)
- Wrote SQL queries using GROUP BY, HAVING, JOINs, aggregate functions (SUM, AVG, COUNT), and window functions (SUM() OVER PARTITION BY for running totals, RANK() OVER for top expense categories) to extract revenue trends
- Performed exploratory data analysis using Pandas (groupby, filtering, pivot tables) to identify spending patterns, monthly trends, and top expense categories
- Built an interactive Power BI dashboard with slicers, bar/line charts, and KPI cards visualizing income vs. expenses, monthly cash flow, and category-wise financial performance

Ecommerce Customer Analysis *MySQL | SQL | Excel | Python | Pandas | Power BI | GitHub*

- Preprocessed and structured retail e-commerce order datasets in MySQL by standardizing schema datatypes (STR_TO_DATE), mapping auto-generated keys, and verifying data integrity for missing/null attributes.
- Formulated SQL analytical queries utilizing GROUP BY, HAVING, BETWEEN date ranges, and Window Functions (SUM() OVER PARTITION BY) to track running sales revenue, customer order frequencies, and return rates.
- Designed modular MySQL Stored Procedures and SQL Views (2024_data, 2025_years_data, Kitchenware_product, Electronics_products) to dynamicize time-series revenue rollups and seasonal product category reporting.
- Utilized SQL Transactions (START TRANSACTION, COMMIT, ROLLBACK) and conditional logic to manage secure database updates across pricing, product metadata, and order return records.
- Built an interactive Power BI dashboard and performed Exploratory Data Analysis using Python/Pandas to visualize monthly revenue growth, top purchasing customers (>50k spend), and 5-star product return trends.

ACHIEVEMENTS

- **AAGHAZ Hackathon (State-Level Participant)** — Collaborated in a competitive state-level hackathon to build and pitch an innovative tech solution under time constraints
- **Elite 0.1 Hackathon (National-Level Participant)** — Demonstrated problem-solving, rapid prototyping, and teamwork at a national hackathon, competing against top engineering students

SOFT SKILLS

Problem Solving • Analytical Thinking • Teamwork & Collaboration • Communication • Quick Learner • Attention to Detail

LANGUAGES

English • Hindi • Marathi
